

# Congrats on getting your Plapp App!

Plapp can be installed on the target android device without having to download it from Play Store.

If you have previously installed Plapp, a prompt will ask you to update the old one.

If this is your first time, you can follow these three simple steps:

## 1. Setting up your device

On the target phone: SETTINGS → SECURITY → *select*: UNKNOWN SOURCES.

(For old Android: SETTINGS → APPLICATION OPTION → *select*: UNKNOWN SOURCES)

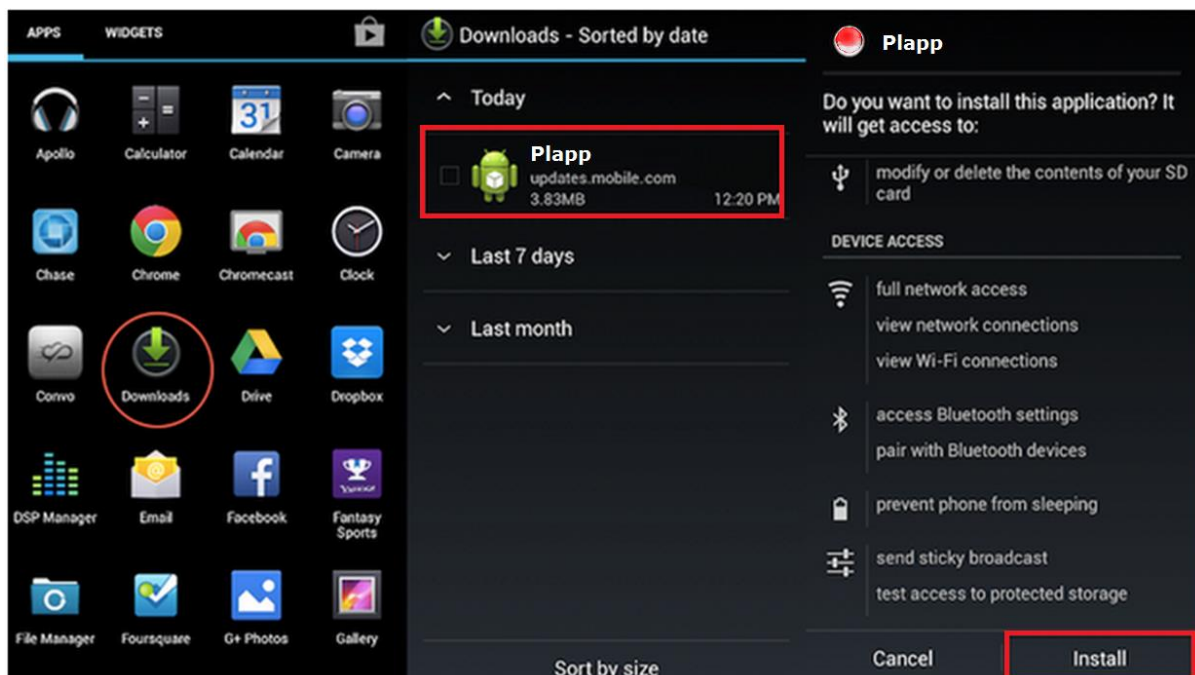

## 2. Transferring the app

Once you receive the email with the app, you have to send it to your target phone. The best way is to open the email directly on the target phone. Alternatively you can send it via email, Bluetooth or cable transfer.

## 3. Downloading and installing the app

Once you receive the app via email (in format APK), you need to install it on the target phone. This is a standard download/install process:

On the target phone: DOWNLOADS → press on “name\_of\_your\_app” → press on INSTALL.
